

Removing **FAST1**[®]

Blue is New! The new **FAST1**[®], available since March 2008, does not require a Remover Tool. **When you see the blue tip on the Infusion Tube, simply grasp the Tube firmly at the site of insertion and pull to remove.**

For those with older **FAST1**[®] devices in inventory, the Remover Tool must still be used for Infusion Tubes without a blue tip. Unsure how to use the Remover Tool? Simply review the removal procedure on page 8 of the [Trainer's Manual](#).
